**NEW STATEMENT:**

Due to the high quantity of organics (**living carbon, dissolved and stabilized oxygen and fulvic acid**) in **intraCELL™ V** (our proprietary carbon-bond organic technology) **Panacea™** CANNOT be assayed for the presence of its ingredients by ANY known laboratory testing equipment available today. However, the **living organics** are tested and proven via Carbon & Proton Nuclear Magnetic Resonance (NMR) Testing, Trace Minerals are tested and proven via glass Class A volumetric flasks as follows: the elements Chloride, Fluoride and Bromine were analyzed via Ion Chromatography (I.C.). Cold Vapor Atomic Absorption (CVAA) was used for analysis of Mercury. Graphite Furnace Atomic Absorption (GFAA) was used to determine Arsenic, Selenium, Lead, and Antimony. Semi-quantitative analysis for all other elements was carried out using Inductive Coupled Plasma - Optical Emission Spectrometry (ICP-OES).
